

[Augmented Intelligence – AI]

High-performance man-machine cooperation

Our AI solution, the digital assistant "Fred", bundles and processes the information already available in the company. He provides employees with an intuitive and streamlined tool in their web browser that offers them just the data they are looking for – exactly when they need it.

Time saving when gathering information

Less workload for your employees

Resource gain for your company

Smart solution with no IT project

As experts for Augmented Intelligence [AI], we advise companies and offer tailored solutions.

Use Case

[Use Case]

Scoring of Building Objects

via Augmented Intelligence [AI]

The Challenge

Construction companies receive early information from data providers about new construction sites on the market. Due to the sheer volume of new potential construction projects, a high qualification effort is required to identify the most relevant properties.

The Solution

„Fred“

- processes the delivered building objects
- rapidly evaluates them using a scoring model which is based on customizable criteria
- provides the results to the responsible sales employees
- prioritizes the building object list

AI solution
„Fred“
Your Digital
Assistant

Benefits for your company:

- significant reduction of workload for sales employees
- 100 building objects are scored in less than 3 seconds
- competition advantage thanks to early identification of the most relevant construction objects
- optimized use of resources in further sales procedures by eliminating irrelevant construction projects at an early stage
